* Resnet

→ when try really deep n.n from scratch, sometimes it performs worse than shallower

→ not b/c of overfit, but struggle in finding good solution.

→ can make d. network that performs like a smaller network by start with smaller network than adding layer that do nothing (identity layers). These i L just pass through the i/p through unchanged.

→ Residual Block

→ special kind of layer that makes it easy for the network to learn the ident fnct.

→ It does this using a skip connection

Skip connect:-

→ skip some layer & adds the orig

Resnet

→ Inspired by VGG

→ add residual blocks to make
